EDUCATION

GITAM University
2023 - 2027

SKILLS

Python Java JavaScript

TensorFlow PyTorch

OpenCV NLP

React Node.js Docker

GCP

CERTIFICATIONS & AWARDS

- Google Cloud Computing Foundations
- Prompt Engineering Spec. (Vanderbilt)
- AI Buildathon'25 Achievement
- Google Cloud Arcade Champion 2025
- SIH 2025 Qualifier

PROFESSIONAL SUMMARY

AI/ML engineering student at GITAM University focused on building real-world intelligent systems using Machine Learning, Generative AI, RAG pipelines, and cloud technologies. Experienced in developing AI-powered applications including conversational agents, satellite image classifiers, and natural-language analytics platforms. Strong interest in Agentic AI, scalable backend systems, and full-stack AI product development.

KEY PROJECTS

- Python, FastAPI, Gemini, Grok, React

 - Engineered a multi-agent AI architecture simulating market dynamics and investor sentiment.
 - Implemented deterministic fallbacks to guarantee robust, uninterrupted 12-second simulations.
- React, FastAPI, PostgreSQL, pgvector, RAG

 - Developed a scalable RAG pipeline over global Argo Float telemetry using pgvector and FAISS.
 - Orchestrated a production-ready Docker Compose environment with decoupled Map rendering.
- Python, Scikit-learn, Pandas, Streamlit

 - Architected an ML platform analyzing 5M+ UIDAI records with an 85%+ accuracy demand forecasting model.
 - Deployed an Isolation Forest anomaly detector mapping over 43,000 suspicious records.
- Next.js 15, React Native, Firebase, Tailwind CSS

- Designed a cross-platform gamified event ecosystem using a synchronous monorepo architecture.
- Engineered zero-latency event sync and complex NoSQL schemas for frictionless QR check-ins.

LEADERSHIP

2024 - Present

Contributing to open-source projects and mentoring peers in AI/ML concepts.

2021 - 2022

Managed student teams and organized school-wide cultural and sports events.
